

080-0550 Downsized Grapple Compression Latch

This new grapple style compression latch is designed for compartments, access panels and hoods for off-highway vehicle applications that are subject to high vibration loads. Similar in function to TriMark's 080-0500 Grapple Style Compression Latch, this version offers a space saving design that is retrofittable to popular competitor latches. Offering 5mm (.197") of compression, the three robust opposing jaws work with a striker diameter of 8.0-9.5mm (.315"-.375"), providing a high level of resistance to vibration, shock and wear.

FEATURES/BENEFITS:

- Its use in gasketed applications meets requirements for environmental sealing, noise and airflow management—helps reduce or eliminate noise and rattle caused by vibration
- Provides sturdy door support to eliminate extra wear/stress on door hinges as seen with other latches that provide minimal support
- Sealed housing provides for minimal intrusion of dirt and water
- Intuitive open and close actuation does not require a turning operation with the handle
- Handle provides over-center action and remains up (flagged) when latch is open providing visual open/closed status
- Designed to fit mounting cutout of popular competitor latches (86mm/3.39" square mounting)
